

AI/ML Engineer

SUMMARY

AI/ML Engineer with hands-on experience in Deep Learning, Data Science, Python programming, Agentic AI, LLM's and taking ideas end-to-end from prototype to production. Intelligence Corps Unit 8200 alumni with strong background in statistics, data analysis, and applied research. Track record of developing production-grade ML algorithms and refining them for accuracy and efficiency. B.Sc. in Computer Science. Team-oriented collaborator with a strong sense of personal accountability, adaptability, and clear communication.

PROFESSIONAL EXPERIENCE

ML Engineer, DRS RADA Technologies 2025 - Present

- Led development of data labeling workflows, leveraging **Active Learning** methodologies to enhance model training efficiency, cutting analysis time and manual labeling workload by **~50%** while surfacing mislabeled samples in previously annotated data.
- Built analytical tools for **performance analysis** and algorithm refinement that exposed lab-to-production inference gaps and mapped model **overfit** and **underfit** regions, driving accuracy improvements across **algorithm pipelines** and radar-based applications, catching **~3 algorithmic bugs per model release** before deployment.
- Utilized **MLflow, TensorFlow, PyTorch, Dash, SciPy, Optuna**, and **Hydra** to build **end-to-end ML pipelines** from prototype to **production**. Training and fine-tuning **deep learning transformer** based models on GPU.

Data Science Analyst, DRS RADA Technologies 2021 - 2025

- Developed algorithms for **time-series analysis, forecasting, and anomaly detection** to uncover actionable insights and improve model performance; signal noise and outlier reduction cut both **training and inference time** and raised detection accuracy.
- Automated data enrichment and labeling processes by integrating **external APIs** with radar tracking systems, recovering **thousands of previously missed tracks**.
- Applied **statistical analysis** and machine learning techniques to extract insights and improve system reliability in real-world conditions.

Field Engineer, DRS RADA Technologies 2018 - 2021

- Conducted **field experiments and radar tests** to validate system performance in real-world environments.
- Customer training, technical support, and demonstrations to ensure effective deployment and usage.

RF Engineer, Intelligence Corps, Unit 8200 2015 - 2018

- Hands-on responsibility in critical **RF system design**, including transmission and reception planning, and lab testing with advanced equipment such as Network Analyzers and Spectrum Analyzers.
- Led **product integration**, equipment validation, and implementations in laboratory and field environments.

EDUCATION

Bachelor of Science in Computer Science, Holon Institute of Technology (HIT) 2020 - 2023

Strong foundation in computer science principles, algorithms, data structures, and software development.

Associate degree in Electronics and Computers, Ort Hermelin College 2013 - 2015

As part of the Technological Track of the Intelligence Corps, focusing on electronics and computer systems.

OTHER OCCUPATIONS

Volunteer Mentor, Future Partners Program

- Mentored teenagers from underrepresented communities in software and tech-leadership to facilitate their integration into elite military technological units and the tech industry.

Independent AI/LLM Projects

- Built RAG pipelines using LangChain, OpenAI APIs and ChromaDB for knowledge retrieval and automated analysis.
- Developed LLM-based AI agents for task automation and information extraction in stock market evaluation and prediction sphere.

PROFESSIONAL SKILLS

Programming Languages: Python, C, C++, Java, SQL

Agentic & Generative AI: LLM, LLM Agents, RAG, Tool-Calling, MCP, LangChain, LangGraph, OpenAI API, Embeddings, Vector DBs, ChromaDB, FAISS, Claude Code

ML & Deep Learning: PyTorch, TensorFlow, Hugging Face, scikit-learn, Transformers, Fine-Tuning, Active Learning, GPU Training

ML Engineering & MLOps: Model Deployment, Model Evaluation, Experiment Tracking, Hyperparameter Optimization, MLflow, Optuna, Hydra, Docker, CI/CD, Git, Azure

Data & Analysis: NumPy, Pandas, SciPy, Spark, Dash, Time-Series Analysis, Forecasting, Anomaly Detection, Statistical Analysis

Backend & Data Stores: FastAPI, Django, REST API, Async Python, asyncio, MongoDB, Redis

Signal Processing & RF: Signal Processing, Radar Technology, RF Systems, Real-Time Systems, Algorithm Development

Languages: Hebrew: Native | English: Fluent | Russian: Native
